EXPERTS FOR THE REAL WORLD SINCE 1842

1842 CASE is founded.

1869 The first CASE portable steam engine - road construction is born.

1957 The first factory - integrated loader/backhoe in the world: a CASE industry first.

1969 CASE begins skid steer loader production.

1992 Sumitomo becomes supplier to CASE Corporation distributing excavators ranging from 7 to 80 tons.

1998 Global Alliance signed between CASE Corporation and Sumitomo.

2001 CASE introduces the first of its CX excavators, powerful new “thinking machines” designed to enhance productivity through onboard intelligence features.

2007 CX210B is awarded the «Good Design Award» by the design Academy of Japan.

2008 CX210B wins the 18th «Energy Conservation Award» from the Agency for Natural Resources

and Energy of the Japanese Ministry of Economy.

2011 CASE becomes the first construction equipment manufacturer to offer both selective catalytic reduction and cooled exhaust gas recirculation as solutions to meet stringent emissions standards.

2015 CASE launches the new “D series” Tier 4 final/ EU Stage IV Crawler Excavators.

2018 CASE begins producing Stage V models for Europe.

THE RAREST MATCH

SPEED AND CONTROLLABILITY

COMPACT PERFORMANCE

The CASE Short Radius models are the perfect machines for jobsites where space is limited, such as road or urban construction.

Our SR models bring to your jobsite all the benefits of the D Series, so that you can get the job done in confined spaces with no compromise on performance.

The high operating weight and standard undercarriage in blade configuration ensure greater stability and outstanding maneuverability in narrow spaces.

The machines offer best-in-class lift capacity, delivering high productivity across a great variety of applications.

FAST CYCLES

High performance hydraulics control

- The electrically controlled pumps deliver faster cycle times.
- Oil flow can be adjusted according to working needs, or increased smoothly when starting travel and boom down.
- As a result, the machine responsiveness to operation load is multiplied, resulting in cycle times up to 5% faster than the previous generation.

HIGH PRECISION AND CONTROLLABILITY

Smooth control with the CASE Intelligent Hydraulic System

The proven CASE Intelligent Hydraulic System (CHIS) delivers impressive machine control with unrivalled energy savings in all cycle time phases (digging, boom up and swing, dumping).

D-SERIES CRAWLER EXCAVATORS

HIGH VERSATILITY

Wide offering

Versions with and without blade, Mono boom, 2 piece boom and offset boom to match the different working needs.

Working modes easily adapt to every work load

The familiar working mode systems offers 3 power modes to match different requirements.

- A** MODE for grading, lifting and precision work.
- H** MODE the best balance between productivity and fuel economy.
- SP** MODE extra speed and power for the most demanding jobs that require maximum productivity.

Auto Power boost automatically increases hydraulic pressure according to the operation's demands.

CASE interference device is standard in **offset** boom version, allowing the operator to use the attachment closer to cabin in fully safety. Transportation height is also reduced.

HIGH QUALITY

Accurate, simple and robust design for high durability

- True to CASE's enviable reputation for reliability and durability, the D-Series delivers leading design solutions and manufacturing quality.
- Wide choice of arm solutions, including the heavy-duty arm with reinforcement plate and bars on the bottom side.

ENERGY SAVING & ADAPTIVE CONTROL

THE SECRET

HIGH EFFICIENCY: THE SECRET

Great performances with low fuel consumption

CASE Intelligent Hydraulic System (CIHS) like an ORCHESTRA DIRECTOR coordinates the different components and make them the work in harmony. The result is that force is matched by manoeuvrability, delivering an impressive adaptive smooth control during each transition from one movement to other by ensuring that energy is saved in every cycle phase. The operator, even the most demanding, feels immediately in controls of the machine's huge power with the highest precision he can ever wish.

- Torque control decreases main pump loads to prevent a drop in engine rpm.
- Boom Economy Control (BEC) increased fuel efficiency during boom lower and swing operations.
- Swing Relief Control (SWC) carefully manages the hydraulic power distribution in slewing operations.
- Spool Stroke Control (SSC) creates an automatic pressure adjustment during digging and leveling operations.
- The Auto Idle and the Idle Shutdown functions avoid unnecessary fuel consumption.
- Boom oil Regeneration Control (BRC) for CX245D SR uses the boom down movement to make arm opening faster.

CLEANER (STAGE V)

EU Stage V compliant engines

- The new STAGE V engine meets the latest EU standards for engine exhaust emissions that sets new limit for particle number (PN) and further reduced particulate matter (PM) levels.
- Water separator sensor linked to a dedicated message on machine monitor to drain water when level in filter is too high.
- New final safety filter (maintenance free) to protect the engine from dust during the main filter replacement.
- Oil gas recirculation in closed circuit PCV (Positive Crankcase Ventilation) for CX245D SR makes sure the oil gas are filtered, separated and sent back to the crankcase, avoiding dispersion into the air.
- The engine of the latest generation, electronically controlled with Variable Geometry Turbocharger, high pressure common rail with multi-injection ensures great performances and low fuel consumption.
- Largest Adblue® tank in the industry allows longer working time without stopping for Adblue refill (5 fuel refills before a stop for CX245D SR, 7 fuel refills for CX145D SR). With CASE no time is wasted and your refill is more efficient and safe.

THE SCIENCE BIT

The CASE SiteWatch telematics system uses a high-tech control unit mounted on each machine to collate information from that machine and from GPS satellites. This data is then sent wirelessly through the mobile communication networks to the CASE Telematics Web Portal.

SiteWatch: centralised fleet control benefits at your fingertips

Measure your true asset availability and optimise it

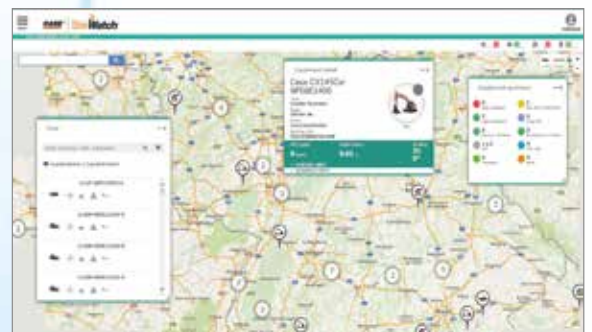

- Eliminate the “phantom fleet”: SiteWatch allows to identify spare units or under loaded machines on each site.
- Able to reallocate units where they are more needed.
- Maintenance planning is easier since the actual machine hours are available and alerts will be sent when a service is due.
- Extend the benefits of SiteWatch to the rest of your fleet: SiteWatch can be installed on the units of other brands as well.

Challenge your Total Cost of Ownership!

- Being able to compare the fuel usage of different machine types will allow you choose the right equipment.
- Save on transport costs with planned and grouped service interventions.
- Peace of mind, optimised uptime and lower repair costs: with preventive maintenance you can be alerted if the engine needs to be serviced and avoid a disruptive breakdown.
- Be able to compare your asset Return on Investment on different sites.
- Your equipment is used only during working hours. You can receive alerts when is in use during the weekend or at night.

More safety, lower insurance premium

- Keep thieves away: dissuade them from attacking your asset because it is geo-localised. SiteWatch is hidden so that thieves can't find it quickly.
- Geo-fencing your asset. You can define a virtual fence and receive an email when a machine exits that perimeter.
- Recover your asset if it is taken away, thanks to the asset's continuous tracking.
